

Oil-less Claw Technology in a “Space Saver” Package

The Problem:

Whether it's a large healthcare facility or a small surgery center, floor space is valuable. And in a retrofit situation, maneuvering a replacement system into position among existing equipment is tough.

With that in mind, we at Patton's Medical chose to go up instead of out with our new Claw “Space Saver” Medical Vacuum system.

The Solution:

- Available from 2 through 10 hp
- NFPA 99 compliant
- 34” W x 66” L x 79” H
- HMI “Touch Screen” controls
- Variable Frequency Drive available
- O₂ Safe available
- Single Point Connections for the intake and electrical connections
- Virtually maintenance free operation

The “Space Saver” package utilizes the same durable and proven contactless claw technology by Busch that we use in our other vacuum packages. In addition, you won't find a smaller duplex 10 hp vacuum system on the market. You said you needed a small reliable package and we listened.

Innovation our competitors can only copy.

For more information, see our specification pages under Medical Vacuum Systems, Rotary Claw and look for the “Space Saver” products.

How may we help you?
